ANTONY PETER T

C++ Programmer | Unity3D · Unreal Engine · Real-Time Rendering · Docker

Madurai / Bengaluru, India | +91 7708501621 | petert1997@gmail.com | antonypetert.weebly.com

C++ programmer with 7+ years of production experience across Unity3D and Unreal Engine, spanning AAA co-development, real-time rendering services, and medical simulation. Delivered gameplay, rendering, and editor tooling on shipped Unity titles (Stampede: Racing Royale, Mars Horizon 2) and Unreal-based content pipelines, and currently ship a Dockerized, browser-deployed simulation product in production. Strong C++/OOP fundamentals, linear algebra, and rendering-pipeline background; comfortable owning features end-to-end from design through integration.

TECHNICAL SKILLS

Languages: C, C++, GLSL

CS Fundamentals: OOP, Design Patterns, 3D Math / Linear Algebra

Gaming Engines: Unity3D, Unreal Engine

Tools: Docker, Git, CMake, Visual Studio

Graphics APIs: OpenGL, Vulkan API

EXPERIENCE

Senior Software Developer — Mimyk Medical Simulations *Dec 2025 – Present*

Bengaluru, India — deep-tech medical simulation spin-off from IISc

- Developing a browser-deployed Anesthesia Simulation used to train doctors; own the Docker-based build and delivery pipeline for the WebGL deployment.

Senior Graphics Programmer — Viga Entertainment Technology *Nov 2024 – Oct 2025*

Bengaluru, India — real-time rendering services

- Built editor tooling in Unreal Engine that streamlined data content creation and validation, cutting manual steps out of the asset pipeline.

Junior Programmer — Sumo India Studios *Sep 2021 – Oct 2024*

Pune, India — AAA co-development studio

- Owned pipeline work end-to-end (dev, test, integration) on the Zwift co-development contract.
- Shipped gameplay and rendering features on Stampede: Racing Royale (Unity), a Steam-released title.
- Implemented hexagonal grid systems and terrain renderer tooling on Mars Horizon 2 (Unity), released on Steam.

Junior Software Developer — Mimyk *Jul 2019 – Aug 2021*

Bengaluru, India

- Built endoscopic simulation cases and scenes in Unity3D, supporting design and implementation of new diagnostic and therapeutic cases for lower and upper intestinal anatomy.

Unity Developer Intern / Junior — InfiVR *Aug 2018 – May 2019*

Bengaluru, India — AR/VR/MR

- Built a Mixed Reality application simulating medical equipment using the HoloLens Toolkit.

PERSONAL PROJECTS

OpenGL C++ Graphics Engine — Personal / Ongoing

- Custom math library (vectors, matrices, transformations) built from scratch; deferred rendering pipeline with a functioning PBR (Cook-Torrance) path.
- Post-processing stack: HDR, gamma correction, tonemapping, bloom, SSAO.
- Material pipeline for configuring render state, shaders, uniforms, and samplers; Mesh/Model classes built on the Assimp loader; render-buffer/draw-command abstraction.

EDUCATION

B.E., Computer Science — Sethu Institute of Technology *(2014 – 2018)*
